PROFILE SUMMARY

AI Software Engineer specializing in building production-grade **LLM applications**, **multi-agent applications**, **chat engines**, and **Retrieval-Augmented Generation (RAG)** pipelines across **AWS cloud-native** and **standalone setups**. Experienced in building **agent-based** applications using **AWS Bedrock Agents**, **AutoGen**, and **MCP**, focusing on scalable AI solutions.

SKILLS

Programming & Frameworks

Python, FastAPI, Flask, **LangChain**, LangGraph, LlamaIndex, Streamlit, Hugging Face, LangSmith

AI & Generative AI

LLMs (GPT, Claude), **Retrieval-Augmented Generation (RAG)**, **Prompt Engineering**, Fine-tuning, **Agentic AI**, **Multi-Agent Architectures** (**AutoGen**, CrewAI, MCP, Strands Agents), **AWS Bedrock Agents**, Bedrock Data Automation (**BDA**)

Cloud, Data & Tools

AWS (**Bedrock**, **Lambda**, **S3**, **AgentCore**, **Knowledge Bases**), Embedding Models, **Vector Databases** (FAISS, Pinecone, pgvector), **SQL**, REST APIs, Airflow, Pandas, NumPy, Scikit-learn, Transformers, PyTorch, Docker, **Git**, CI/CD, **GCP**

EXPERIENCE

Kadel Labs, *Software Engineer, Bangalore* Sep 2025 – Present

- Independently architected and deployed to **production** a **multi-agent** property inspection platform on **AWS Bedrock Agents** and **Lambda**, reducing manual review cycles from multi-day timelines to 15–20 minutes via automated image-based damage detection, data extraction, and property record validation.
- Implemented a conversational **chat engine** using **MCP** integration for client-vendor management, enabling real-time tracking of vendor-employee availability, performance risks, and compliance through natural language querying.
- Built a distributed web crawling pipeline across 25 VMs, processing 50+ URLs daily with **Airflow** and deployed on **GCP**.
- Awarded **“Employee of the Year (2025–26)”** for delivering high-impact AI solutions and driving workflow automation.

Kadel Labs, *Trainee Software Engineer, Bangalore* Feb 2025 – Aug 2025

- Built an **AI-powered BI dashboard** with **FastAPI** backend and NLP interface converting natural language queries into real-time SQL execution, delivering dynamic analytics and visualizations for comprehensive property data analysis.
- Developed **RAG** applications using **LangChain** and **vector DB** with domain adaptation, explored **fine-tuning** techniques (QLoRA), and built **multi-agent** workflows using CrewAI, LangGraph, **AutoGen**, and **MCP** for automated task execution.

PROJECTS

Property Preservation & Inspection Agents

- Independently architected and **deployed to production** a property inspection platform on **AWS Bedrock Agents**, automating analysis via image-based damage detection, data extraction, & record validation to generate audit-ready reports.
- Engineered a **multi-agent** architecture with a Supervisor Agent orchestrating photo analysis, data aggregation, and questionnaire processing via **AWS Lambda**, implementing scalable pipelines for large-scale image retrieval, deduplication, parallel analysis, questionnaire-driven evaluation, and batch-based report generation through LLM workflows.

Medical Research Multi-Agent Platform

- Built an **AutoGen** powered multi-agent system with **Model Context Protocol** integration for automated retrieval and synthesis of PubMed research articles, accelerating literature research, with a conversational interface to query large-scale article datasets and extract contextual insights through streamlined **agent-driven workflows**, leveraging intelligent query routing, autonomous data extraction, and LLM-based summarization.

EDUCATION

REVA University, *Bachelor of Computer Applications* Aug 2021 – Aug 2024 | Bengaluru

- CGPA: 8.22

CERTIFICATIONS

Certified Master in Agentic AI  , AI Engineer Professional  , Mastering AI on AWS  , Context Design for AI Agents
